

Nimrat Kaur

Product Designer

Madison, WI | nimratksdndhi@gmail.com | +1 585-536-7564 | [Portfolio](#)

Authorized to work in the US (OPT-STEM eligible, no sponsorship required for up to 3 years)

Digital Product Designer with a foundation in interaction design, user research, and frontend development, creating intuitive digital experiences by bridging design, business, and technology.

EDUCATION

BS in Data Science, Information Science & Psychology, Digital Studies Certificate

May 2026

University of Wisconsin-Madison | Madison, WI

Coursework: Interaction Design Studio, Human-Computer Interaction, Web Design, Data Storytelling & Visualization, Applied Database Design, Data Ethics, Research Methods, Statistical Data Visualization

- Dean's List: Fall 2022, Fall 2024, Spring 2025, Spring 2026

SKILLS

Tools & Technologies: Figma, Framer, React, Vue, TypeScript, HTML/CSS, Python, R, SQL, Adobe, Tableau, Jira

Design & Strategy: Visual Design, Information Architecture, User Journey Mapping, Wireframing, Prototyping, Usability Testing, Design Systems, Accessibility (WCAG), Responsive Design, Design Thinking

EXPERIENCE

UI/UX Lead & Product Analyst– Capstone | *Schneider National*

February 2026 – May 2026

- Led end-to-end interaction design for Schneider's FreightPower Owner Operator platform, defining navigation systems, user flows, and interface patterns to simplify complex load discovery and decision-making workflows.
- Conducted user research, usability analysis, and clickstream analysis to identify friction points, translating behavioral insights into user journeys, product requirements, and prioritized design improvements.
- Implemented frontend interface improvements in React and communicated design rationale to engineering stakeholders, ensuring precise alignment between design intent and production.

AI & Data Strategy Intern | *Aagati Serve*

June 2025 – August 2025

- Designed user-centered interaction workflows for a multimodal AI healthcare platform, translating complex clinical data into clear, accessible interface structures for non-technical end users.
- Built an NLP pipeline that parsed unstructured medical PDFs into structured clinical content, enabling automated generation of patient-facing digital education experiences and reducing manual content creation time by 80%.
- Collaborated with engineers and product stakeholders to evaluate system usability, articulate design rationale, and propose interaction improvements that balanced technical constraints with user experience goals.

Undergraduate Research Assistant | *Schloss Visual Reasoning Lab*

January 2025 – Present

- Designed and implemented the full frontend interface and interaction flow for a semantic distance calculator using Vue.js, translating complex computational outputs into clear, accessible visual elements.
- Applied visual hierarchy and interaction design principles to make research findings interpretable for both technical and general audiences, iterating across multiple wireframe versions and testing interface variations to refine the final design.

PROJECTS

Tether App Design

- Designed a scalable interaction framework for a centralized student mobile platform, defining navigation models, screen flows, and interface behavior from research through high-fidelity prototypes.
- Translated user research and behavioral insights into intuitive interface solutions, creating Figma prototypes to demonstrate product functionality and align stakeholders on design decisions.

Wisconsin Conservation Voices Website Redesign

- Conducted usability testing and behavioral analysis to identify breakdowns in the donation experience, redesigning user flows and navigation to simplify the journey, driving a 50% increase in task completion.
- Designed user flows, wireframes, and interactive Figma prototypes, focusing on interaction clarity, visual hierarchy, and edge cases to simplify navigation and create a more intuitive, polished experience.

Kickapoo Valley Reserve Website Redesign

- Led the redesign of site navigation and information architecture, restructuring content hierarchy to improve discoverability and surface previously overlooked programs and events.
- Developed high-fidelity interactive prototypes in Figma to test navigation structure and communicate design decisions with stakeholders before implementation.

ACTIVITIES & AFFILIATIONS

Design Interactive | Women in Scientific Education and Research (WISER), UW-Madison
